

# Front-end developer / designer

## About us

We specialise in service robotics. With our universal robot operating system, *ZBOS*, we are the worldwide leader in consumer targeted robot software. Our main office in Oostende, Belgium currently employs 35 people with a broad set of skills. We are currently looking to expand our team.

## Your job profile

You give shape to Android and web-based applications. You can create and implement designs based on wireframes and/or requirements. You have a feeling for user friendly and clear interfaces and strive to perfection when inventing them. You think outside the box and are product-focussed and responsible about your work.

## Skill requirements

- Strong knowledge of web technology (Javascript, CSS3, HTML5)
- Experience with Angular or AngularJS-based applications
- Experience with Django (or comparable) based backend applications
- Able to convert requirements into conceptual designs, into graphic designs and finally into actual implementation
- You are an experienced GIT user

## Technologies

The products you will work on use the following technologies:

- Angular and AngularJS
- Ionic / Cordova
- Python, Django

## Application

Please send your application with CV and motivation letter to Christophe Michiels:
